Добро пожаловать!

Мегатренды ближайших лет

	Business need	Technology enablers
0-3 years. Industry and Scenario Based ERP: Fit App to Your Need		
Vertical Applications	Packaged application modules to meet specific industry based business problems without custom programming. Seamlessly fit into ERP, HCM, Finance.	Modular applications with API-based integration, common interfaces, microservices-based architecture
Ecosystem Bolt-On Applications	Ability to seamlessly add third-party ecosystem applications for project, scenario-based use cases.	API management, and microservices architecture, rapid app development tools
2-5 years. Composable Application: LOB and Users in Control		
Composable and modular Applications	Replace monolithic applications with discrete modules that can be interconnected to provide optimum business value. Cut development time, and boost agility with applications that can be composed by combining and linking together other applications through easy-to-use tools.	Comprehensive and accessible APIs and application services layer. Low-code development and integration.
Ecosystem of ThirdParty Applications	More easily incorporate third-party applications to hasten productivity and innovation. Use third-party applications as part of a composable application.	Comprehensive and accessible APIs and application services layer.
